

Matrix Multiplication via Two Hadoop MapReduce Jobs*

Montasser AKERMI

Last Update: March, 2025

*The course material is hosted at <https://akermi.org/c2/>.

Learning objectives

Write a MapReduce application to compute the product of two matrices.

Input Data

MatrixName;LineNumber;ColumnNumber;Value

M;1;1;1
M;1;2;2
M;1;3;3
M;2;1;3
M;2;2;5
M;2;3;1
M;3;1;0
M;3;2;1
M;3;3;1
N;1;1;3
N;1;2;1
N;1;3;3
N;2;1;2
N;2;2;2
N;2;3;2
N;3;1;1
N;3;2;3
N;3;3;2

Output Data

LineNumber;ColumnNumber;Value

1;1;10.0
1;3;13.0
2;2;16.0
3;1;3.0
3;3;4.0
1;2;14.0
2;1;20.0
2;3;21.0
3;2;5.0

Solution

Listing 1: FirstMapper.java

```
1 import java.io.IOException;
2
3 import org.apache.hadoop.io.Text;
4 import org.apache.hadoop.mapreduce.Mapper;
5
6 public class FirstMapper
7     extends Mapper<Object, Text, Text, Text> {
8
9     public void map(Object key, Text value, Context context
10 ) throws IOException, InterruptedException {
```

```

11     String line = value.toString();
12     String[] element = line.split(";");
13
14     if ("M".equals(element[0])) {
15         context.write(new Text(element[2]), new Text(
16             String.format("M;%s;%s", element[1], element[3])));
17     } else {
18         context.write(new Text(element[1]), new Text(
19             String.format("N;%s;%s", element[2], element[3])));
20     }
21 }
22 }

```

Listing 2: FirstReducer.java

```

1  import java.io.IOException;
2  import java.util.ArrayList;
3  import java.util.Arrays;
4  import java.util.List;
5
6  import org.apache.hadoop.io.Text;
7  import org.apache.hadoop.mapreduce.Reducer;
8
9  public class FirstReducer
10     extends Reducer<Text, Text, Text, Text> {
11
12     public void reduce(Text key, Iterable<Text> values,
13         Context context
14     ) throws IOException, InterruptedException {
15         List<List<String>> M = new ArrayList<List<String>>();
16         List<List<String>> N = new ArrayList<List<String>>();
17
18         for (Text val : values) {
19             String[] element = val.toString().split(";");
20             if ("M".equals(element[0])) {
21                 M.add(Arrays.asList(element));
22             } else {
23                 N.add(Arrays.asList(element));
24             }
25         }
26
27         for (List<String> elementM : M) {
28             for (List<String> elementN : N) {
29                 float product = Float.parseFloat(elementM.get(2))
30                     * Float.parseFloat(elementN.get(2));
31                 context.write(null, new Text(String.format("%s;%s;%.1f",
32                     elementM.get(1), elementN.get(1), product)));
33             }
34         }
35     }
36 }

```

Listing 3: SecondMapper.java

```

1  import java.io.IOException;

```

```

2
3 import org.apache.hadoop.io.Text;
4 import org.apache.hadoop.mapreduce.Mapper;
5
6 public class SecondMapper
7     extends Mapper<Object, Text, Text, Text> {
8
9     public void map(Object key, Text value, Context context
10 ) throws IOException, InterruptedException {
11         String[] element = value.toString().split(";");
12         context.write(new Text(String.format("%s;%s",
13             element[0], element[1])), new Text(element[2]));
14     }
15 }

```

Listing 4: SecondReducer.java

```

1 import java.io.IOException;
2
3 import org.apache.hadoop.io.Text;
4 import org.apache.hadoop.mapreduce.Reducer;
5
6 public class SecondReducer
7     extends Reducer<Text, Text, Text, Text> {
8     public void reduce(Text key, Iterable<Text> values,
9         Context context
10 ) throws IOException, InterruptedException {
11         float sum = 0.0f;
12
13         for (Text value : values) {
14             sum += Float.parseFloat(value.toString());
15         }
16
17         context.write(null, new Text(String.format(
18             "%s;%.1f", key.toString(), sum)));
19     }
20 }

```

Listing 5: MatrixMultiplication.java

```

1 import java.io.IOException;
2
3 import org.apache.hadoop.conf.Configuration;
4 import org.apache.hadoop.fs.Path;
5 import org.apache.hadoop.io.Text;
6 import org.apache.hadoop.mapreduce.Job;
7 import org.apache.hadoop.mapreduce.lib.input.FileInputFormat;
8 import org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
9
10 public class MatrixMultiplication {
11
12     public static void main(String[] args)
13         throws IOException, ClassNotFoundException, InterruptedException {
14         Configuration conf1 = new Configuration();
15         Job job1 = Job.getInstance(conf1, "Matrix Multiplication - Step 1");

```

```

16     job1.setJarByClass(MatrixMultiplication.class);
17     job1.setMapperClass(FirstMapper.class);
18     job1.setReducerClass(FirstReducer.class);
19     job1.setOutputKeyClass(Text.class);
20     job1.setOutputValueClass(Text.class);
21     FileInputFormat.addInputPath(job1, new Path(args[0]));
22     FileOutputFormat.setOutputPath(job1, new Path(args[1]));
23
24     job1.waitForCompletion(true);
25
26     Configuration conf2 = new Configuration();
27     Job job2 = Job.getInstance(conf2, "Matrix Multiplication - Step 2");
28     job2.setJarByClass(MatrixMultiplication.class);
29     job2.setMapperClass(SecondMapper.class);
30     job2.setReducerClass(SecondReducer.class);
31     job2.setOutputKeyClass(Text.class);
32     job2.setOutputValueClass(Text.class);
33     FileInputFormat.addInputPath(job2, new Path(args[1]));
34     FileOutputFormat.setOutputPath(job2, new Path(args[2]));
35     System.exit(job2.waitForCompletion(true) ? 0 : 1);
36 }
37 }

```

Note: It is highly recommended to manually write the code instead of copy/pasting.
